                                                                               familial dysbetalipoproteinaemia, type III hyperlipoproteinaemia, atherosclerosis, and Alzheimer's disease. They are useful to validate APOE as a candidate agent for treating a specific condition or disease predicted to be associated with APOE activity and in the design of clinical trials of candidate drugs for treating a specific condition or disease predicted to be associated with APOE activity. Genotyping or haplotyping methods are useful to screen for compounds targeting or haplotyping methods are useful to screen for compounds targeting APOE to treat a specific condition or disease associated with APOE activity. The present DNA sequence is an allele specific oligonucleotide (ASO) probe which is used for detecting human APOE gene polymorphisms.
                                                                                                                                                                                                                                       The patent discloses novel genetic variants of human apolipoprotein E (APDE) gene. The invention also relates to compositions and methods for haplotyping and/or genotyping the APDE gene. The haplotyping methods of the invention are useful for improving the efficacy and reliability of several steps in the discovery and development of drugs for treating diseases associated with APDE activity, e.g.
                                                                                                                                                                                                                                                                                                                                                                                      Genotyping human apolipoprotein gene of individual for determining haplotype of individual, involves determining identity of nucleotide pair at specific polymorphic sites for two copies of gene -

                                                                                                                                                                                                                                                                                                                                                                                                               Matches 11;
                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes an enzymatic nucleic acid molecule which specifically cleaves RNA derived from a c-fos gene. AAV95401 to AAV95540 and AAV95541 to AAV95584 represent hammerhead ribozymes and hairpin ribozymes, respectively, which specifically cleave human c-fos. AAV95261 to AAV95400 and AAV95585 to AAV95628 represent human c-fos target sequences. The enzymatic nucleic acid molecules can be used for treating cancer associated with elevated levels of c-fos oncogene, especially leukaemias, neuroblastomas and lung, breast and colon cancers. The ribozymes may also be used as diagnostic tools to examine genetic drift and mutations within diseased cells, or to detect the presence of c-fos RNA in a cell.

CC alkaloids; or (ii) involved in flower formation. AAV95322 to AAV96334, CC and AAV96335 to AAV96354 represent potato solanidine glucosyltransferase CC hammerhead and hairpin ribozymes, respectively. AAV95325 to AAV959981, CC and AAV96335 to AAV96773 represent potato solanidine glucosyltransferase CC target sequences. AAV96773 to AAV97170, and AAV97171 to AAV97195 (C respectively. AAV96773 to AAV97170, and AAV97171 to AAV97195 (C respectively. AAV96773 to AAV97172, and AAV97196 to AAV97220 represent CC potato citrate synthase target sequences. Ribozymes of the present CC invention can be used to inhibit the synthesis of toxic alkaloids in CC solanaceous plants, particularly potato but also tomato, pepper, CC aubergine and ditura or to inhibit flowering in potato, lettuce, spinach, CC aubergine and turf grass. Also the ribozymes can be used for RNA CC manipulation in the same way that restriction endonucleases are for DNA, CC sweet potato and turf grass. Also the ribozymes can be used for RNA CC manipulation in the same way that restriction endonucleases are for DNA, CC as well as to examine genetic drift and mutations in plants and to consensus sequences within a family of related genes, and being CC cataluric manipulation and to a respect at a family of related genes, and being consensus sequences within a family of related genes, and being consensus sequences within a family of related genes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAA23422 represent their corresponding target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARWT, integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related macular degeneration (ARMD), inflammation, and arthritis, as well as neovascular glaucoma, myopic degeneration, psoriasis, verruca vulgaris, angiofibroma of tuberous sclerosis, pot-wine stains, Sturge Weber syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, and other syndromes and diseases related to the levels of ARNT, Tie-2, integrin subunit alpha-6, or integrin subunit beta-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA1675 to AAA1767 and AAA1763 to AAA17622 represent ribozyme sequences for RNT, and AAA17168 to AAA17630 and AAA17623 to AAA1764 represent their corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 and AAA19155 to AAA20361 and AAA21501 to AAA21505 represent tribozyme sequences; AAA19223 to AAA20361 and AAA21501 to AAA21505 to AAA21500 and AAA21505 to AAA21689 to AAA21688 represent their corresponding target sequences; AAA21506 to AAA21688 represent their corresponding target sequences; AAA21506 to AAA21688 represent their corresponding target sequences; AAA21506 to AAA22475 and AAA23263 to AAA23342 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA2362, AAA23343 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     expression element (LEE or CEE). The method comprises obtaining a DNA segment consisting of an open reading frame (ORF) and linking the ORF to a promoter and a terminator. The LEEs and CEEs are useful for screening gene function, biological effects of gene functions, antigens and promoter functions. LEEs and CEEs are useful for producing antibodies to an ORF and also in developing immunological reagents, and may be used in the production of vaccines. Sequences AAA09607-A09611 represent primers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Producing a linear or circular expression element useful for a number of molecular biology protocols, comprises obtaining a DNA segment consisting of an open reading frame and linking it to a promoter and terminator

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              expression element (LEE or CEE). The method comprises obtaining a DNA segment consisting of an open reading frame (ORF) and linking the ORF to a promoter and a terminator. The LEEs and CEEs are useful for screening gene function, biological effects of gene functions, antigens and promoter functions. LEEs and CEEs are useful for producing antibodies to an ORF and also in developing immunological reagents, and may be used in the production of vaccines. Sequences AAA09607-A09611 represent primers
                                                                                                                                          fowlpox virus for generating or priming an immune response against heterologous protein in a vertebrate. Suitable proteins include HIV proteins such as HIV gp160, HIV Gag and HIV Gag-Pol proteins. The proteins sequence was associated with the generation or use of the
                                                                                                                                                                                                                                                                                                                                                                 Use of modified vaccinia virus and priming an immune response against

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                             The invention relates to a method for producing a modified eukaryotic cytoplasmic DNA virus by direct molecular cloning of a modified DNA molecule comprising a modified cytoplasmic DNA virus genome such as a vaccinia virus, containing a heterologous insert encoding a protein. The method involves molecularly cloning the DNA directly into a host cell via a unique restriction endonuclease cleavage site, to be packaged into infectious virions and then recovering them. The host cell is infected with a helper virus for this purpose. The method is useful for producing recombinant proteins and modified eukaryotic cytoplasmic DNA viruses such as poxviruses and iridoviruses found in vertebrates and insects. This

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     adenylate cyclase associated primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a light-controlled adenylate cyclase which polypeptide extracted from the duplicate flagellum body of Euglena o partial peptide. The adenylate cyclase and the DNA are used in an in light switch. The current sequence represents a light-controlled
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New light-controlled adenylate cyclase, useful for in vivo light switch
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2002-221713/28

The present sequence represents a preferred target sequence for an enzymatic nucleic acid (i.e. a ribozyme) which cleaves mRNA coding for a protein of respiratory syncytial virus (RSV) at the nucleotide base position indicated in the DE line. Regions of the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozymes cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the target sequences and can be used for treatment and diagnosis of RSV infection.

                                                                                                                                                               The present invention describes a novel enzymatic nucleic acid (ENA) having a hammerhead motif (HM) comprising: (1) at least 5 ribose residues; (ii) a 2'-C-allyl modification at position 4 of the ENA; (iii) at least ten 2'-C-methyl modifications; and (iv) a 3'-end modification. The ENA's can inhibit collagenase and stromelysin production in the synovial membrane of joints for the treatment or prevention of arthritis, particularly osteoarthritis or rheumatoid arthritis. The ENA's can also be used to treat antigen presenting cells of a donor to induce tolerance in a recipient to an alloantigen of a donor. They can also be used for enhancing graft tolerance or for treating autoimmune disease, and for treating allergies and other inflammatory conditions. The ENA's can also be used in diagnosis. Ribozyme therapy impacts on the expression of stromelysin without introducing the non-specific effects upon gene expression which accomment treatment with variance and alloantic producing the non-specific effects upon gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         02-MAY-1995;

CC AAT49608-T49863 represent target sequences for the human cholesterol
CC ester transfer protein (CETP) hammerhead (HH) ribozymes (see
CA AT498881-T50137). CETP is a 74 kD glycoprotein that facilitates neutral
CC lipid transfer between plasma lipoproteins. The numbering of the targets
CC refers to the position of the cleavage site in full length CETP. The
CC ribozyme binds to 5 nucleotides either side of this site, provided the
CC expression of the mRNA. By inhibiting CETP, thereby blocking synthesis and/or
CC expression of the mRNA. By inhibiting CETP, the reverse cholesterol
CC transport (RCT) pathway can be inhibited (or eliminated) thereby
CC preventing the reduction in size density of the high density lipoproteins
CC (HDL), prolonging HDL half life and therefore increasing HDL levels.
CC The ribozymes can be used to treat conditions associated with abnormal
CC etherosclerosis, peripheral vascular disease, hyperbetalipoproteinaemia,
CC atherosclerosis, peripheral vascular disease, hyperbetalipoproteins of
CC diabetes, transplant, atherectomy and angioplastic restenosis. By
CC inhibiting CETP, the levels of HDL and low density lipoproteins (LDL),
CC and the HDL:LDL ratio are favourably altered (a decrease in LDL levels,
CC and a corresponding increase in HDL levels). The HH ribozymes can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     neutral lipid tränsfer; plasma lipoprotein; atherosclerosis; atherectomy; reverse cholesterol transport; high density lipoprotein; therapy; CETP; familial hypercholesterolaemia; dyslipidaemia; hyporalphalipoproteinaemia; peripheral vascular disease; hyperbetalipoproteinaemia; RCT; inhibitor; angioplastic restenosis; low density lipoprotein; diabetes; HDL; human;
                                be used diagnostically to study genetic drift and mutations in diseased cells, and to detect CETP mRNA. As the HH ribozymes target specific regions of the CETP gene, they have low non-specific activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bisgaier

                                                                                                                                                                                                                                                                                                                The present invention describes nucleic acid molecules which modulate the synthesis, expression and/or stability of a mRNA encoding 1 or more receptors of vascular endothelial growth factor (VBGP). A patient (preferably human) having a condition associated with the level of the fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be treated by administering the nucleic acid molecule or the expression vector to the patient. ```
This sequence represents a probe for a wild type HIV reverse CC transcriptase (RT) gene fragment. This sequence can be used in the method CC of the invention for determining the susceptibility to antiviral drugs of CC viruses which contain RT genes and are present in a biological sample. It CC comprises: (1) releasing, isolating or concentrating the polynucleic CC acids present with at least one suitable primer pair; (3) hybridising the golynucleic acids of step (1) or (2) with at least two RT gene probes. CC the probes being applied to known locations on a solid support, and are CC capable of simultaneously hybridising to their respective target regions under appropriate hybridisation and wash condition allowing the detection of homologous targets, or with the probes hybridising specifically with a sequence complementary to any of the target sequences; (4) detecting the CC hybrids formed in step (3); and (4) inferring the nucleotide sequence at the codons of interest (codons 38-44, 47-53, 65-72, 73-77, 148-154, CC 180-187, 212-216, and 217-220), and/or the amino acids of the codons of codons of interest and/or antiviral drug resistance spectrum, and possible the type obtained in step (4). The method is specifically used to detect antiviral crug resistant strains of viruses containing RT genes, especially HIV creating the method can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Reverse transcriptase gene; HIV; RT gene; antiviral drug susceptibility; virus susceptibility; antiviral drug resistant viral strain; retrovirus; Hepadnaviridae; HIV RT genotyping; probe; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Determining susceptibility to antiviral drugs of reverse transcriptase containing viruses - useful for genotyping

Modification of (II) by (I) can facilitate synthesis, purification and analysis of many insoluble polymers, and particularly purine-rich PNA polymers labeled with hydrophobic labels. The products can be used in research, diagnostic and therapeutic applications. The present sequence represents a PNA and in the account of the present sequence represents a PNA committee of the present sequence represents

The antisense oligonucleotides inhibit the expression of IGF-1R, which in turn induces apoptosis, especially in a tumour cell. The oligonucleotides can be administered via a liposome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    haemopoietin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid sequences with the nucleic acid probe sequence TGGAGYNNUTGAGY encoding the amino acid sequence TTp-Ser-Xaa-TTp-Ser. The sequences of probe AAZ59258-Z59300 and AAZ90816-Z90925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The
                       The invention relates to the isolation of sequences encoding human haemopoietin receptor protein family NR8 genes. The NR8 family sequences were initially searched comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAZ559258-Z59300 and AAZ90816-Z90925 represent specific examples of probe
              sequences used in the search.

                                                                                                  haemopoietin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYUNUNTGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences ARZ59258-Z59300 and ARZ90816-Z59925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                  Sequence

The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAZ59258-Z59300 and AAZ90816-D7925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified

The NR8 family sequences were initially searched comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAZ59258-Z59300 and AAZ90816-Z90925 represent specific examples of prob

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                   The invention relates to the isolation of sequences encoding human haemopoietin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences the ARZ59258-Z59300 and ARZ90816-Z90925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence TTp-Ser-Xaa-TTp-Ser. The sequences AAZ59258-Z59300 and AAZ90816-Z99925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.

                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                               The invention relates to the isolation of sequences encoding human haemopoietin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAZ59258-Z59300 and AAZ90816-Z59925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the isolation of sequences encoding human haemopoietin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences probe AAZ59258-Z59300 and AAZ90816-Z90925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.
               Hemopoietin receptor protein family NR8 used for diagnosis of blood formation disorders -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                   The invention relates to the isolation of sequences encoding human haemopoietin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAZ59258-Z59300 and AAZ90816-Z59925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the isolation of sequences encoding human haemopoletin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAZ59258-Z59300 and AAZ90816-Z90925 represent specific examples of probe sequences used in the search. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAZ59258-2539300 and AAZ90816-Z90925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as the binding to the proteins are the formation of the transmission of the compounds identified as the protein of the protein of the compounds identified as the protein of the compounds identified as the protein of the protein

Example 1; Page 44; 176pp; unpublic to the isolation of sequences encoding numbers has protein family NR8 genes. The NR8 family has sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence TTp-Ser-Xaa-TTp-Ser. The sequences the sequence Ttp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-TTp-Ser-Xaa-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sequences were initially beautiful probe sequence TGGAGYNNNTGGAGY encouring database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encouring the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences of probe AAX59258-Z59300 and AAZ90816-Z99025 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified used for the treatment of such disorders.

The present sequence is that of a stem-loop rat Syk antisense oligonucleotide (ODN). The loop domain consists of 3 tandemly joined antisense ODNs (see AAH26012-14), each targeted to a different region of rat Syk mRNA. Thus, the stem-loop antisense ODN can hybridise to 3 different sites of rat Syk mRNA. It was used in an experiment to demonstrate inhibition of histamine release from histamine-containing RBL-2H3 rat mast cells using Syk antisense ODNs. The invention provides a claimed method of inhibiting the release of a mediator from a Syk-producing cell by introducing into the cell an antisense construct that targets an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 15 BP; 2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SSSSSSS
                                                                The patent relates to polymorphic variants of human cholinergic receptor, comuscarinic 3 (CHRM3) gene. The polymorphic variant comprises at least one single nucleotide polymorphisms selected from cytosine at PS1, adenine at PS2 or PS3, and cytosine at PS4. The invention also relates to a method for genotyping and haplotyping the CHRM3 gene for identification of cyariants. The polymorphic variant is useful for therapeutic purposes, for studying the expression and biological function of CHRM3. CC for studying the expression and biological function of CHRM3 protein.

CC The variant is also useful in diagnostics and forensic applications. CC The recombinant nonhuman organism transfected with the polymorphic variant is useful for studying expression of CHRM3 isogenes in vivo, for in vivo screening and testing of drugs targetted against CHRM3 CC for in vivo screening and testing of drugs targetted against CHRM3 CC for Alzheimer's disease, Sjogren's syndrome, disorders associated with smooth muscle contractility and sudden infant death syndrome. The CHRM3 content is useful in drug screening asserts and its arribodies are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                              (Mitochondrial, proton carrier) (UCP3) gene and polymorphisms. The polymorphisms are associated with obesity, especially diabetes mellitus associated obesity. They polymorphism may be identified and analysed to determine whether an individual is susceptible to obesity and may be used as the basis for targeted design of drugs to treat obesity. The present sequence was used the identification and amplification of UCP3 polymorphisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

Polymorleotides comprising polymorphic gene variants are useful for therapeutic purposes. For example, where a patient may benefit from expression of a particular IL4Ralpha protein isoform, an expression vector encoding the isoform may be administered to the patient. It may desirable to decrease or block expression of a particular IL4Ralpha isogene, which may be done by turning off by transforming a targeted organ, tissue or cell population with an expression vector that expresses high levels of untranslatable mRNA for the isogene. Specific therapeutics identified by these methods may be useful for allergic diseases. The present sequence is a probe for human IL4R-alpha.
                                                                                                                                                                                                                                                                       IGFBP2
                                                                                                                                                                                                                                                                                                                           30-MAR-2001

The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contracting the skin with an antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an antisement sequence is an antisement sequence.

                                                                                                                                               The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an antisense oligonuclectide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotide of the present invention (see AAF45151 and AAF45153-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other selects of sclerotic disease, kidney disease, hyperproliferation of the inside of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of skin disorders. The method comprises contacting the skin with an antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotide of the present invention (see AAF45151 and AAF45153-F45.61). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of

The method comprises contacting the skin with an antisense oligonuclectide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonuclectide which can be used to design the antisense oligonuclectides of the present invention (see AAF45151 and AAF45153-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of blood vessels or any other hyperproliferation.
                                                                                                                                                                                                                                                                                                                                                                            Antisense therapy; antiproliferative; antiinflammatory; antipsoriatic; cytostatic; dermatological; cardiant; virucide; ophthalmological; keloid; skin disorder; Insulin-like Growth Factor, 1 receptor; IGF-1; pityriasis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, ifflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotides of the present invention (see AAF45151 and AAF45153-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of the condition of the inside of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antisense therapy; antiproliferative; antiinflammatory; antipsoriatic; cytostatic; dermatological; cardiant; virucide; ophthalmological; keloid; skin disorder; Insulin-like Growth Factor 1 receptor; IGF-1; pityriasis; IGF binding protein; IGFBP-2; IGFBP3; inflammation; psoriasis; pilaris; growth factor mediated cell proliferation; ichthyosis; serborrhoea; ruba; keratosis; neoplasia; scleroderma; wart; skin cancer; sclerotic disease; hyperneovascular condition; hyperplasia; kidney disease; neovascular condition of the retina; ss.
                                                                                                                     nucleic acid that inhibits or reduces proliferation and/or inflammation -
                                                                                                                                                                           Ameliorating the effects of a disorder, e.g. psoriasis, ladministering UV (ultra-violet) treatment (optional) and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of skin disorders. The method comprises contacting the skin with an antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFB]-2 or IGFB23), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotides of the present invention (see AAF45161 and AAF45153-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other selectic disease, kidney disease, hyperproliferation of the inside of
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antisense therapy; antiproliferative; antiinflammatory; antipsoriatic; cytostatic; dermatological; cardiant; virucide; ophthalmological; keloid; skin disorder; Insulin-like Growth Factor 1 receptor; IGF-1; pityriasis; IGF binding protein; IGFBP-2; IGFBP3; inflammation; psoriasis; pilaris; growth factor mediated cell proliferation; ichthyosis; serborrhoea; ruba; keratosis; neoplasia; scleroderma; wart; skin cancer; sclerotic disease; hyperneovascular condition; hyperplasia; kidney disease;
                                                                                                                                   Ameliorating the effects of a disorder, e.g. psoriasis, by administering UV (ultra-violet) treatment (optional) and an a nucleic acid that inhibits or reduces growth factor mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 15

The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contracting the skin with an antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotides of the present invention (see AAF45151 and AAF45153-F45161). The method is useful for ameliorating the effects of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         keratosis; neoplasia; scleroderma; wart; skin cancer; sclerotic disease; hyperneovascular condition; hyperplasia; kidney disease; neovascular condition of the retina; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotides of the present invention (see ARF45151 and ARF45153-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of
                                                                                                                                                                                                                                                                                                                                               Ameliorating the effects of a disorder, e.g. psoriasis, by administering UV (ultra-violet) treatment (optional) and an inucleic acid that inhibits or reduces growth factor mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antisense therapy; antiproliferative; antinflammatory; antipsoriatic; cytostatic; dermatological; cardiant; virucide; ophthalmological; keloid; skin disorder; Insulin-like Growth Factor 1 receptor; IGF-1; pityriasis; IGF binding protein; IGFBP-2; IGFBP3; inflammation; psoriasis; pilaris; growth factor mediated cell proliferation; ichthyosis; serborrhoea; ruba;
                                                                                                                                                                                                                                                                                                                                proliferation and/or inflammation

of skin disorders. The method comprises contacting the skin with an antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotide of the present invention (see AAF45.51 and AAF45.53-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of tiskin, a hyperneovascular condition such as a neovascular condition of the state of the process of the p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SSSSS
                                          CC The present invention relates to a method for ameliorating the effects CC of skin disorders. The method comprises contacting the skin with an CC antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 CC receptor, IGF binding protein [IGFBP]-2 or IGFBP3], which is capable of inhibiting or reducing growth factor mediated cell proliferation, CC inflammation and/or other disorders. The present sequence is an CC oligonucleotide which can be used to design the antisense CC oligonucleotide which can be used to design the antisense CC oligonucleotides of the present invention (see AAF45151 and CC AAF45153-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, CC keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other CC sclerotic disease, kidney disease, hyperproliferation of the inside of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                      The present invention relates to a method for ameliorating the effects CC of skin disorders. The method comprises contacting the skin with an CC antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 CC receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, CC inflammation and/or other disorders. The present sequence is an CC oligonucleotide which can be used to design the antisense CC oligonucleotides of the present invention (see AF45151 and AF45153-F45161). The method is useful for ameliorating the effects of CC psoriasis, inchhyosis, pityriasis, ruba, pilaris, serbornhoea, kaloids, CC keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the CC skin, a hyperneovascular condition such as a neovascular condition of the Skin, a hyperneovascular condition such as a neovascular condition of the CC sclerotic disease, kidney disease, hyperproliferation of the inside of CC blood vessels or any other hyperplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The specification describes a method of synthesis of biologically active CC substances of determined structure directly in the cells of living crystalisms containing specific RNA or DNA sequence. The method is based CC on the hybridisation of two or more oligomers bound with biologically inactive substances to specific RNA or DNA in vivo in the cells of CI inactive substances to specific RNA or DNA in vivo in the cells of CI inactive substances to specific RNA or DNA in vivo in the cells of CI inactive precursors bound to the oligomers can interact with each other CC inactive precursors bound to the oligomers can interact with each other CC in the continuous and reactions which bind the biologically inactive form of the substances. This changing of properties CI is due to chemical reactions which bind the biologically active form of the whole compound. The methods are useful for producing biologically continuous from inactive precursors. These compounds may be considered to the compounds from inactive precursors. These compounds may be continuous from inactive precursors. These compounds may be continuous from the cellular metabolism. DNA replication, RNA cranscription, RNA translation, RNA elongation RNA processing, protein continuous processing, cellular metabolism. DNA replication, CCI in channel transmission, cellular protein and RNA transportation, CCI processes of cellular oxidation, toxins, proteins or RNAs. Oligomers are CC Ancastalel to human NbHOT, which is specific to ovarian cancer cells. The method of the invention is used to produce the tumour suppressor p53, and the oligomers are constant of the control of the foundation of the specific to ovarian cancer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Biologically active compound; cellular metabolism; DNA replication; RNA transcription; RNA translation; RNA clongation; RNA processing; protein synthesis; protein processing; cellular differentiation; cell division; ion channel transmission; cellular protein; toxin; RNA transportation; cellular oxidation; tumour suppressor p53;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             producing proteins or polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel methods for the synthesis of biologically active compounds from inactive precursors in the cells of living organisms, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-006911/01.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                            This invention relates to a novel method for preventing phagocytosis of immune complexes comprises introducing an inhibitor of a kinase endogenous to phagocytic cells associated with an Fc receptor at the membrane of the cells under conditions so that the phagocytic potential of the cells is inhibited. The method of the invention may have immunosuppressive, dermatological, antiinflammatory, antiarthritic, antirheumatic and antiasthmatic activities and may be used as a kinase inhibitor. The method and compositions of the invention may be used for modulating the clearance of antibody coated cells, viruses and soluble antigens by inhibiting phagocytosis and modulating the interaction of immune complexes with cellular to tissue Fc receptors. The method is used for treating autoimmune diseases, immune mediated diseases e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    14-SEP-1998;

                                                                                                                                                                                                                                                                 The present invention relates to novel peptide modulators of androgen receptor. The peptides of the invention are useful for treating androgen-associated disorders such as prostate cancer, particularly hormonally refractive prostate cancer, colon cancer, lung cancer, benign prostatic hypertrophy, acne, hirsutism, male pattern baldness, Stein-Leventhal syndrome, androgen insensitivity syndrome, infertility, endometrial cancer and X-linked spinal bulbar muscular atrophy. The present DNA sequence is MVDP gene androgen responsive element (ARE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Androgen receptor; androgen-associated disorder; prostate cancer; acne; benign prostatic hypertrophy; hirsultism, androgen insensitivity syndrome; male pattern baldness; Stein-Leventhal syndrome; infertility; cytostatic; X-linked spinal bulbar muscular atrophy; antiseborrheic; dermatological; depilatory; androgen responsive element; ARE; MVDP gene; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a ribozyme recognition site for the proliferating cell nuclear antigen (PCNA) gene which is cleaved by a harpin ribozyme at position 867 and by a hammerhead ribozyme at position 869. Novel ribozymes are being investigated for their ability to inhibit the activity of a growth factor (e.g. PCNA) responsible for abnormal smooth muscle cell (SMC) proliferation in vascular tissue leading to restenosis. The ribozymes can also directly block the production of oncogenes and cell regulatory factors involved with SMC growth following vascular injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New hairpin and hammer:head ribozyme(s) - which inhibit abnormal smooth muscle cell proliferation in vascular tissue, partic. for preventing or treating restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ribozyme; hairpin; hammerhead; proliferating cell nuclear antigen; growth factor; oncogene; vascular tissue; SMC; PCNA; recognition site; restenosis; smooth muscle cell proliferation; ss.

Representative examples of ribozyme recognition sites are given it AAA82415 to AAA86787. The ribozyme of the invention is useful for inhibiting restenosis by introduction of the ribozyme into cells.
                                                                      The present invention relates to a hairpin or hammerhead ribozyme, designed to cleave RNA encoding a cyclin or cell-cycle dependent kinase other than cell-cycle dependent kinases CDKI, PCNA and Cyclin B1.

                   The present invention describes a method for treating a proliferative skin or eye disease and scarring. The method involves administering a ribozyme (I) which cleaves RNA encoding a cytokine involved in inflammation, matrix metalloproteinase (MMP), cyclin, cell-cycle dependent kinase, growth factor or a reductase, or administering a nucleic acid molecule (II) comprising a promoter operably linked to a nucleic acid segment encoding (I). (I) can have antipsoriatic, dermatological, cytostatic, antiseborrheic, antidiabetic, antisickling, ophthalmological, vulnerary, keratolytic and virucide activities, and cleaves RNA encoding cytokine involved in inflammation. (I) can be used in gene therapy. (I) and (II) are useful for treating proliferative skin diseases such as psoriasis, atopic dermatiis, actinic keratosis, squamous or basal cell carcinoma and viral or seborrheic wart. They can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; ribozyme therapy; hairpin ribozyme; hammerhead ribozyme; recognition site; target; ribozyme binding site; eye disease; vulnerary; proliferative disease; skin disease; psoriasis; diabetic retinopathy; cytokine; inflammation; cell-cycle dependent kinase; cyclin; MMP; matrix metalloproteinase; growth factor; reductase; scarring; cytostatic; antipsoriatic; dermatological; antiseborrheic; antidiabetic; virucide; antisickling; ophthalmological; keratolytic; gene therapy; viral wart; atopic dermatitis; actinic keratosis; squamous cell carcinoma; basal cell carcinoma; seborrheic wart; vitreoretinopathy; scar;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treating proliferative skin or eye diseases and scarring, using ribozymes that cleave RNA encoding cytokines involved in inflammation, matrix metalloproteinases, growth factors and cell-cycle dependent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The ribozyme efficient in

ribozyme (I) which cleaves RNA encoding a cytokine involved in inflammation, matrix metalloproteinase (MMP), cyclin, cell-cycle dependent kinase, growth factor or a reductase, or administering a nucleic acid molecule (II) comprising a promoter operably linked to a nucleic acid segment encoding (I). (I) can have antipsoriatic, dermatological, cytostatic, antiseborrheic, antidiabetic, antistickling, ophthalmological, vulnerary, keratolytic and virucide activities, and cleaves RNA encoding cytokine involved in inflammation. (I) can be used in gene therapy. (I) and (II) are useful for treating proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Treating proliferative skin or eye diseases and scarring, using ribozymes that cleave RNA encoding cytokines involved in inflammation, matrix metalloproteinases, growth factors and cell-cycle dependent
